

QUICK SETUP GUIDE

We know most people hate reading instructions so...

once you know how to correctly attach the hammock, here is a quick guide

ADAPTABLE - that's what Fly LegsUp has to be, as people and aircraft seats vary so much. We can't tell you exactly what will be best for you, but we can give you ideas and tips to make the most of your space, using our hammock.

STRAPS - slide them HIGH or LOW on the tray table arms to change the height of the hammock

TAIL - with or without. Using the tail gives you more places to put the pillows

PILLOWS - move them around... under your leg... sideways... sloping... on top of each other etc

INFLATION - change the inflation of the pillows to give different effects

FLY LEGS[®] UP

FLIGHT HAMMOCK

Please leave this tag attached to your hammock to help remind you how to find your own perfect positions.

Both legs at full stretch through the front of the hammock

FIT - in some configurations it may look as if your feet and legs will not be able to fit full stretch through the front of the hammock, but once you wriggle and push your feet through, the weight of your legs will create enough space, plus you can slightly deflate a pillow...

One leg at full stretch the other resting sideways onto the pillow

Experiment... think “what will work?”... as you can change it
